

H.S. CALLS™

Squirrel Call

Squirrel calling has never been easier. H.S. Calls versatile Squirrel Call lets you imitate the sounds of a fox squirrel or gray squirrel with a flick of the wrist. Also, the specially designed barrel has a high-pitched port to create those young squirrel distress sounds. This call is so easy and effective you have to try it to believe it.

INSTRUCTIONS:

To use the H.S. Calls Squirrel Call hold the open end of the call, or barrel, and shake it or push the bulb (with hand or against your leg). To make the high pitch distress sound, use the high-pitched distress port on the side of the barrel.

Bark: Great as a locator call, simply tap the bulb lightly 3 or 4 times.

Chatter: This friendly communication call is easily executed by holding the opening end of the call and shaking it.

Alarm Call: When you lose sight of the squirrel, compress the bulb as far as you can and let it go quickly. This startling sound will peak their curiosity and make them move so you can spot them.

Young Squirrel Distress Call: Leave the end of the call open and inhale through the "Distress Port." By doing this quickly and forcefully you can accurately reproduce the cry that makes adult squirrels come looking.
